The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate conn as a sequences and genes that encode homologues of the new proteins. The present sequence represents a rice Beta vulgaris-like sugar transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      515
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               635

Novel plant sugar transport proteins and nucleic acid encoding the protein useful for producing transgenic plants having altered levels of sugar transport protein.

Claim 10; Fig 2; 56pp; English.

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the level of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or institution. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins

Sequence 510 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence represents a wheat Beta vulgaris-like sugar transport

like or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant bara transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the level of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or cententation. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             66 ValMetSerGlyAlaSerLeuTyrIleGlnLysAspLeuLysIleAsnAspThrGlnLeu

The present invention relates to the isolation of plant polymucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polymucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. contrict, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polymucleotide sequences can also be used to isolate orbs and genes that encode homologues of the new proteins. The present sequence represents a wheat Beta vulgaris-like sugar transport
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   287
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    407
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124

The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaria-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the transforming a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or anticularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCAGAGAGGA-----GCCTCCTCCTCTGCACCACCGGAGATGGCTTCCGCCGCGCTG 113

                                                                                                                                                                                                                                                                                                                                                  504
                                                                                                                                                                                                                                                                                                                                                                                                           524
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta wilgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beta vulgaris-like sugar transport protein; carbohydrate transport; filling; annual field crop; plant.
                                                                                                                                                                                                                 445 ThrSerCysAsnArgValThrSerAlaAlaValSerMetSerPheLeuSerLeuSerLys

                                                                                                                                                                                                                                                                                                                                                                                                       ò
plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynuclectide sequences can also be used to isolate cDNA sequences and genes that encode homologues of the new proteins. The present sequence represents a corn Beta vulgaris-like sugar transport protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                               The present invention relates to the isolation of Arabidopsis thalianalike or Beta vulgaris-like sugar transport proteins, and the polynucleotide sequences encoding them. The plant sugar transport proteins of the invention have been isolated from corn, rice, soybean, and wheat. The polypeptides of the invention may be used for altering the level of expression of a sugar transport protein in a host cell, by transforming a host cell with a chimeric construct encoding all, or a portion of the sugar transport protein, in sense or antisense or intention. Particularly, the polypeptides may provide a means to control carbohydrate transport and distribution in plants. ABU08334-ABU08339 represent Beta vulgaris-like sugar transport proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of plant polynucleotide sequences encoding an Arabidopsis thaliana-like sugar transport protein or Beta vulgaris-like sugar transport protein. The polynucleotide sequences are useful for altering the level of sugar transport proteins in plants, i.e. for control of carbohydrate transport and distribution in plant cells, e.g. during grain filling of annual field crops (e.g. corn, rice, soybeans, and wheat), and, for studying carbohydrate flows and sugar transport. The polynucleotide sequences can also be used to isolate present sequences and genes that encode homologues of the new proteins. The protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GTTCTCATGGGCATACTGAACCTCTACTCGCTCATCGGCTCCTTCGCGGCGGGGCGGACG 338

The present sequence represents AgMaT1, which is a transporter of the linear polyol mannitol. DNA encoding the linear polyol is used to produce a selection system for transformed cells, based on the use of polyols as the only carbon source. It is also used to produce transgenic plants with increased resistence to pathogens and salt stress. The use of a linear polyol for selection eliminates the need for toxic selection reagants such as antibiotics. Also, the linear polyol is not essential for the plant, once selection has been made. The linear polyol has a main chain of 5-8, preferably 6, carbon atoms and can also be sorbitol, dulcitol, galactitol, (myo-)inositol, ribitol, or xylitol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 211
                                                                            The invention relates to a novel isolated polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance or its fragment having substantially the same activity as the full-length polypeptide. The polynucleotide of the invention is useful for conferring resistance or tolerance to a plant pathogen. The present sequence represents a protein conferring disease resistance used in the invention.
                                                                                                                                                                                                                                                                                                AAGAAGAAGGCAACGTCCGGTTCGCCTTCGCCTGCCCATCCTCGCCTCCATGACCTCC 191
